#### **Elettronica Santerno to provide inverters for 126 MW PV plant in Thailand**

Italian inverter producer Elettronica Santerno SpA, a subsidiary of industrial conglomerate Carraro Group, has agreed to supply an unnamed Thailand-based solar developer with inverters for a 126 MW PV project being developed in Thailand. In a statement released to PHOTON, Elettronica Santerno said the plant will be built in the central province of Nakhon Sawan and will rely on its three-phase solar inverters. The agreement also calls for Santerno to oversee service and maintenance of the new system for two years, as well as provide support for PV systems in other parts of the country. Elettronica Santerno also revealed that it will soon open a new service center in Thailand with a maintenance team on staff. Elettronica Santerno has recently embarked a strategy to expand into new global markets. In the second half of 2012, the company signed agreements to provide inverters for two large-scale solar projects overseas: a 265 MW project in the US and an 81 MW projects in South Africa. According to new figures from Wiki-Solar, in the first 5 months of 2013, Thailand added 159 MW of large-scale solar in the form of 10 solar power plants over 5 MW in size. This makes Thailand the fifth largest utility-scale solar market in the world in terms of newly added capacity. Only the US, China, India and the UK have added more large-scale solar so far this year. © PHOTON
