

# Energy Management Energy Analyzer Type EM26 96

- 3 digital outputs for pulses or for alarms or as a mix of them (on request)
- Front dimensions: 96x96mm
- Protection degree (front): IP50
- RS485 serial output (on request) (MODBUS-RTU), iFIX SCADA compatibility
- Application adaptable display and programming procedure (Easyprog function)
- Easy connections management
- MID "annex MI-003" (Measuring Instruments Directive) compliant

- Class 1 (kWh) according to EN62053-21
- Class 2 (kvarh) according to EN62053-23
- Accuracy  $\pm 0.5\%$  RDG (current/voltage)
- Dual colour backlight: no backlight, blue or white (selectable)
- Energy analyzer
- Instantaneous variables readout: 4 DGT
- Energies/gas/water readout: 7+1 DGT
- System variables: VLL, VLN, Admd, VA, VAdmd, VAdmd max, W, Wdmd, Wdmd max, var, PF, Hz, Phase-sequence.
- Single phase variables: VLL, VLN, A, VA, W, var, PF
- Energy measurements: total and partial kWh and kvarh or based on 4 different tariffs; single phase measurements
- Gas, cold water, hot water, kWh remote heating measurements
- Hour counter (6+2 DGT)
- Harmonic analysis (FFT) up to 15th harmonic (current/voltage)
- TRMS measurements of distorted sine waves (voltages/currents)
- Universal power supply: 18 to 60VAC/DC, 90 to 260AC/VDC
- 3 digital inputs for tariff selection, DMD synch or gas/water (hot-cold) and remote heating metering (on request)

## Product Description

Three-phase energy analyzer with built-in configuration joystick and LCD data displaying; particularly indicated for active and reactive energy metering and for cost allocation. Housing for panel mounting with IP50 (front) protection degree. External Current and potential trans-

formers connection. Moreover the meter can be provided with digital outputs that can be either for pulse proportional to the active and reactive energy being measured for alarm outputs, RS485 communication port and 3 digital inputs are available as an option.

## How to order **EM26 96 AV5 3 H O3 S1 XX**

|               |         |
|---------------|---------|
| Model         | EM26 96 |
| Range code    | AV5     |
| System        | 3       |
| Power supply  | H       |
| Input/Output  | O3      |
| Communication | S1      |
| Options       | XX      |

## Type Selection

| Range codes  | System   | Power supply   | Input/Output   |
|--|--|--|--|
| AV5: 400/690V <sub>LL</sub> AC<br>1/5(10)A (*)<br>V <sub>LN</sub> : 160 V to 480 V <sub>LN</sub><br>V <sub>LL</sub> : 277 V to 830 V <sub>LL</sub> | 1:<br>3-phase., 2-wire;<br>3-phase, 3-wire,<br>balanced load (**)<br><br>3:<br>balanced and<br>unbalanced load:<br>3-phase, 4-wire;<br>3-phase, 3-wire;<br>2-phase, 3-wire;<br>1-phase, 2-wire (*) | H: 90 to 260VAC/DC<br>(48 to 62Hz) (*)<br><br>L: 18 to 60VAC/DC<br>(48 to 62Hz) (**) | XX: none (*)<br><br>O1: single open collector type (pulse or alarm) (**)<br><br>O3: 3 open collector type (mixed combination of pulse and/or alarm outputs) (*)<br><br>R2: dual relay type (functions as per "O3") (*)<br><br>I3: 3 digital inputs for tariff selection or Gas / water / remote heating metering (***) |

| Alarm type             | Up to 3, independent   |                              |  |
| Number of outputs      | Up alarm, down alarm (see the table "List of the variables that can be connected to")  |                              |  |
| Alarm modes            | From 0 to 100% of the display scale  |                              |  |
| Set-point adjustment   | From 0 to full scale   | <b>RS485</b>                 | Multidrop, bidirectional (static and dynamic variables)  |
| Hysteresis             | 0 to 255s  | Type                         | 2-wire   |
| On-time delay          | Selectable: normally de-energized or normally energized  | Connections                  | Max. distance 1000m  |
| Output status          | $\leq 700\text{ms}$ , filters excluded.<br>Set-point on-time delay: "0 s"  | Addresses                    | Termination directly on the instrument   |
| Min. response time     | The 3 digital outputs can also work as a triple pulse output, triple alarm output, or in any other combination.  | Protocol                     | 247, selectable by means of the front joystick   |
| <b>Note</b>            |  | Data (bidirectional)         | MODBUS/JBUS (RTU)  |
|                        |  | Dynamic (reading only)       |  |
|                        |  | Static (reading and writing) | System and phase variables: see table "List of variables..."   |
|                        |  | Data format                  | All the configuration parameters.  |
|                        |  | Baud-rate                    | 1 start bit, 8 data bit, no parity, 1 stop bit   |
|                        |  | Driver input capability      | 4800, 9600 bits/s  |
|                        |  | Insulation                   | 1/5 unit load  |
|                        |  |                              | Maximum 160 transceivers on the same bus.  |
|                        |  |                              | By means of optocouplers, 4000 VRMS output to measuring input.   |
|                        |  |                              | 4000 VRMS output to power supply input   |
| <b>Static output</b>   |  |                              |  |
| Physical outputs       | Max. 3   |                              |  |
| Purpose                | For pulse output, alarm output or remote control.  |                              |  |
| Signal                 | $V_{ON}$ 1.2 VDC/ max. 100 mA  |                              |  |
| Insulation             | $V_{OFF}$ 30 VDC max.<br>By means of optocouplers, 4000 VRMS output to measuring inputs, 4000 VRMS output to power supply input.                       |                              |  |

## Digital input specifications

|                           |  |  |
|---------------------------|--|--|
| Number of inputs          | 3  | • total and partial energy meters (kWh and kvarh) managed by time periods (t1-t2), W dmd synchronisation (the synchronisation is made independently of the tariff selection) and GAS (m <sup>3</sup> ) or WATER (hot-cold m <sup>3</sup> ) or remote heating (kWh) meters; |
| Input frequency           | 20Hz max, duty cycle 50%   | • total energy (kWh, kvarh) and GAS, WATER (hot-cold m <sup>3</sup> ) and remote heating meters (3 choices only).  |
| Prescaler adjustment      | From 0,1 to 999,9 m <sup>3</sup> or kWh/pulse  | The energy metering is only made by means of the analogue inputs.  |
| Contact measuring voltage | 5VDC +/- 5%  | By means of optocouplers, 4000 VRMS digital inputs to measuring inputs.  |
| Contact measuring current | 10mA max   | 4000 VRMS digital inputs to power supply input.  |
| Input impedance           | 680Ω   |  |
| Contact resistance        | ≤100Ω, closed contact<br>≥500kΩ, open contact  |  |
| Working modes             | Selectable: <ul style="list-style-type: none"><li>• total and partial energy meters (kWh and kvarh) without digital inputs;</li><li>• total and partial energy meters (kWh and kvarh) managed by time periods (t1-t2-t3-t4), W dmd synchronisation (the synchronisation is made every time the tariff changes) and GAS (m<sup>3</sup>) or WATER (hot-cold m<sup>3</sup>) or remote heating (kWh) meters;</li></ul> |  |

## Software functions

|                               |   |   |
|-------------------------------|---|---|
| <b>Password</b>               | Numeric code of max. 4 digits; 2 protection levels of the programming data:<br>Password "0", no protection;<br>Password from 1 to 9999, all data are protected  | by CT ratio is 48600. If the currents and/or voltages being measured exceed their maximum limits, the display shows the error message "EEEE". For MID compliant applications the maximum power being measured is 25 MW. |
| <b>System selection</b>       |   |   |
| System 3-Ph.n unbalanced load | 3-phase (4-wire);<br>3-phase (3-wire).  |   |
| System 3-Ph.1 balanced load   | 3-phase (3-wire) one current and 3-phase to phase voltage measurements.<br>3-phase (4-wire) one current and 3-phase to neutral voltage measurements.<br>3-phase (2-wire) one current and one-phase (L1) to neutral voltage measurement. |   |
| System 2-Ph<br>System 1-Ph    | 2-phase (3-wire).<br>1-phase (2-wire).  |   |
| <b>Transformer ratio</b>      |   |   |
| VT (PT)                       | 1.0 to 999.9 / 1000 to 6000.  |   |
| CT                            | 1.0 to 999.9 / 1000 to 9999 / 10.00k to 60.00k.<br>The maximum power being measured cannot exceed 210 MW (calculated as maximum input voltage and current, see the "Accuracy" paragraph (on page 2)). The maximum VT                    |   |
| <b>Filter</b>                 |   |   |
| Operating range               | 0 to 100% of the input display scale  |   |
| Filtering coefficient         | 1 to 32   |   |
| Filter action                 | Measurements, serial output (fundamental variables: V, A, W and their derived ones).  |   |
| <b>Displaying</b>             |   |   |
|                               | Up to 3 variables per page<br>See « Display pages » 8 different set of variables available (see « Display pages ») according to the application being selected  |   |
| <b>Alarm highlight</b>        |   |   |
|                               | In case of alarm and if the relevant function is enabled, the display changes the colour alternatively from white backlight to blue backlight and vice versa.   |   |
| <b>Reset</b>                  |   |   |
|                               | By means of the front joystick: <ul style="list-style-type: none"><li>- dmd and max. dmd;</li><li>- total energies and</li></ul>  |   |

## Software functions (cont.)

|                                 |  |   |
|---------------------------------|--|---|
|                                 | gas/water: kWh, kvarh;<br>- partial energies and tariffs: kWh, kvarh   |   |
| <b>Harmonic analysis</b>        | Up to the 15th harmonics on single current and voltage   |   |
| <b>Easy connection function</b> | For all the display selections, both energy and power measurements are independent of the current direction. The displayed | energy is always "imported" with the only exception of "F" and "H" types (see "display pages" table). For these latter selections the energies can be either "imported" or "exported" depending on the current direction. |

## General specifications

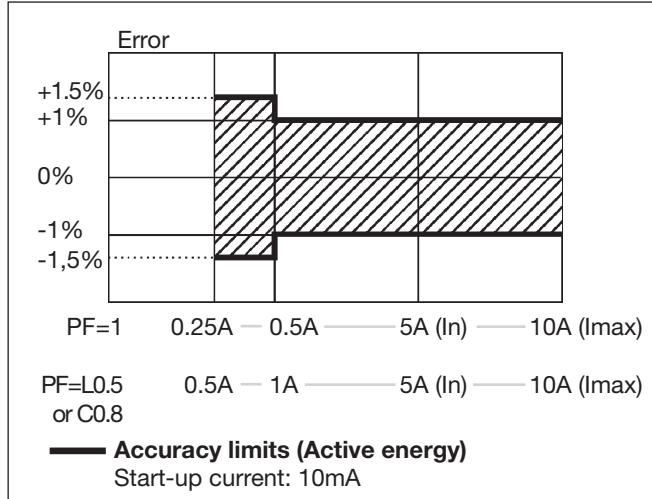

|                                  |   |                                    |  |
|----------------------------------|---|------------------------------------|--|
| <b>Operating temperature</b>     | -25°C to +55°C (-13°F to 131°F) (R.H. from 0 to 90% non-condensing @ 40°C) according to EN62053-21 and EN62053-23 | Immunity to conducted disturbances | 4kV  |
| <b>Storage temperature</b>       | -30°C to +70°C (-22°F to 140°F) (R.H. < 90% non-condensing @ 40°C) according to EN62053-21 and EN62053-23         | Surge                              | 10V/m from 150KHz to 80MHz<br>On current and voltage measuring inputs circuit: 4kV; on "L" auxiliary power supply input: 1kV;<br>According to CISPR 22 |

## Accuracy

**kWh**, accuracy (RDG) depending on the current

**kvarh**, accuracy (RDG) depending on the current

## MID "Annex MI-003" compliance

### Accuracy

AV5-AV6 models

0.9 Un ≤ U ≤ 1.1 Un;  
0.98 fn ≤ f ≤ 1.02 fn;  
fn: 50 or 60Hz;  
 $\cos\phi$ : 0.5 inductive to 0.8 capacitive.  
Class B  
I st: 0.01A;  
I min: 0.05A;

I tr: 0.25A;  
I n: 5A;  
I max: 10A

### Operating temperature

-25°C to +55°C (-13°F to 131°F) (R.H. from 0 to 90% non-condensing @ 40°C)

### EMC compliance

E2

## Used calculation formulas

### Phase variables

Instantaneous effective voltage

$$V_{1N} = \sqrt{\frac{1}{n} \cdot \sum_{i=1}^n (V_{1N})_i^2}$$

Instantaneous active power

$$W_i = \frac{1}{n} \cdot \sum_{i=1}^n (V_{1N})_i \cdot (A_i)$$

Instantaneous power factor

$$\text{PF} = \frac{W_i}{VA_i}$$

Instantaneous effective current

$$A_i = \sqrt{\frac{1}{n} \cdot \sum_{i=1}^n (A_i)^2}$$

Instantaneous apparent power

$$VA_i = V_{1N} \cdot A_i$$

Instantaneous reactive power

$$\text{var}_i = \sqrt{(VA_i)^2 - (W_i)^2}$$

Where: n= sample number

### System variables

Equivalent three-phase voltage

$$V_\Sigma = \frac{V_1 + V_2 + V_3}{3}$$

Three-phase reactive power

$$\text{var}_\Sigma = (\text{var}_1 + \text{var}_2 + \text{var}_3)$$

Three-phase active power

$$W_\Sigma = W_1 + W_2 + W_3$$

Three-phase apparent power

$$VA_\Sigma = \sqrt{W_\Sigma^2 + \text{var}_\Sigma^2}$$

Three-phase power factor

$$\cos\phi_\Sigma = \frac{W_\Sigma}{VA_\Sigma} \quad (\text{TPF})$$

### Energy metering

$$kWh_i = \int_{t_1}^{t_2} P_i(t) dt \cong \Delta t \sum_{j=n_1}^{n_2} P_i(j)$$

$$k \text{ var } h_i = \int_{t_1}^{t_2} Q_i(t) dt \cong \Delta t \sum_{j=n_1}^{n_2} Q_i(j)$$

Where:

P= active power;

Q= reactive power;

t<sub>1</sub>, t<sub>2</sub> = starting and ending time points of consumption recording;

n<sub>j</sub>= time unit;

Δt= time interval between two successive power consumptions;

n<sub>1</sub>, n<sub>2</sub> = starting and ending discrete time points of consumption recording

## List of the variables that can be connected to:

---

- RS485 communication port
- Alarm outputs ("max" variable, "energies" and "hour counter" excluded)
- Pulse outputs (only "energies")

|              | 41   | Serial port   | Address                    | RS485 status               |                               | x            | x | x | x | x | x | x | x |
| 0            |      | Selector position which can be linked to any of the variable combinations listed above (No. from 1 to 46)   |                            |                            |                               |              |   |   |   |   |   |   |   |
| 1            |      | Selector position which can be linked to any of the variable combinations listed above (No. from 1 to 46)   |                            |                            |                               |              |   |   |   |   |   |   |   |
| 2            |      | Selector position which can be linked to any of the variable combinations listed above (No. from 1 to 46)   |                            |                            |                               |              |   |   |   |   |   |   |   |
| 3            |      | Selector position which can be linked to any of the variable combinations listed above (No. from 1 to 46). In this position the front LED blinks proportionally to the reactive energy (kvarh) being measured |                            |                            |                               |              |   |   |   |   |   |   |   |

(1) The page is available according to the enabled measurement. (2) m<sup>3</sup> Gas, m<sup>3</sup> Water, kWh remote heating. (3) Hot or Cold (water). (4) The active tariff is displayed with an "A" before the "t1-t2-t3-t4" symbols.

## Additional available information on the display

| Type                                | 1st line  | 2nd line                              | 3rd line                |
|-------------------------------------|---|---------------------------------------|-------------------------|
| Meter information pag.1             | Lot (production day)                            | Year of production                    | dmd time                |
| Meter information pag. 2            | CT ratio  | Value of CT ratio                     | System (1-2-3-phase)    |
| Meter information pag. 3            | PT ratio  | Value of PT ratio                     | Connection (2-3-4-wire) |
| In case of alarm output pag.4a      | Alarm output 1, 2 or 3 status (ON/OFF)          | Set-point value                       | Variable type           |
| In case of pulse output pag. 4b     | Pulse output 1,2 or 3 variable link (kWh/kvarh) | Output pulse weight (pulse/kWh/kvarh) |                         |
| In case of communication port pag.5 | Serial port                                     | Address                               | RS485 status (RX-TX)    |

## List of selectable applications

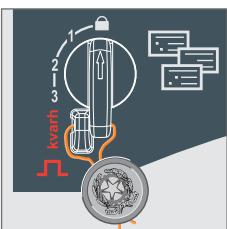

|   | Description                               | Notes  |
|---|---|--|
| A | Basic domestic                            | Main energy metering   |
| B | Shopping centres                          | Main energy metering   |
| C | Advanced domestic                         | Main energy metering (total and based on tariff), gas and water metering |
| D | Multi domestic (also camping and marinas) | Main energy metering (3 by single phase)                                 |
| E | Solar                                     | Energy meter with some basic power analyzer functions                    |
| F | Industrial                                | Main energy metering   |
| G | Advanced industrial                       | Energy metering and power analysis                                       |
| H | Advanced industrial for power generation  | Complete energy metering and power analysis                              |

## Insulation between inputs and outputs

|                   | Measuring Inputs | Relay | Open collector | Comm. port | Digital inputs | Auxiliary power supply |
|-------------------|------------------|-------|----------------|------------|----------------|------------------------|
| Measuring Inputs  | -                | 4kV   | 4kV            | 4kV        | 4kV            | 4kV                    |
| Relay output      | 4kV              | -     | -              | 4kV        | -              | 4kV                    |
| Open collector    | 4kV              | -     | -              | 4kV        | -              | 4kV                    |
| Comm. port        | 4kV              | 4kV   | 4kV            | -          | 4kV            | 4kV                    |
| Digital inputs    | 4kV              | -     | -              | 4kV        | -              | 4kV                    |
| Aux. power supply | 4kV              | 4kV   | 4kV            | 4kV        | 4kV            | -                      |

NOTE: all the models with auxiliary power supply have, mandatory, to be connected to external current transformers because the insulation among the current inputs is just functional (100VAC).

## Tamper proof and display page selection

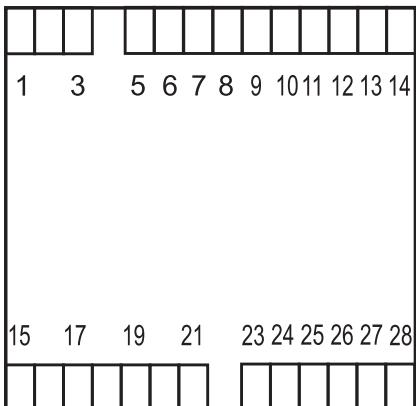

Lock of programming with seal.  
Selection of up to 4 main pages  
(programmable by the user).

Easy access to specific display pages.

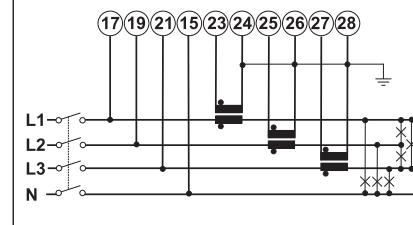

## Wiring diagrams

### System type selection: 3P.n

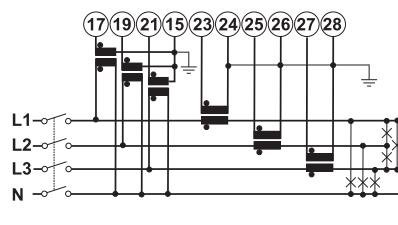

3-ph, 4-wire, unbalanced load Fig. 1

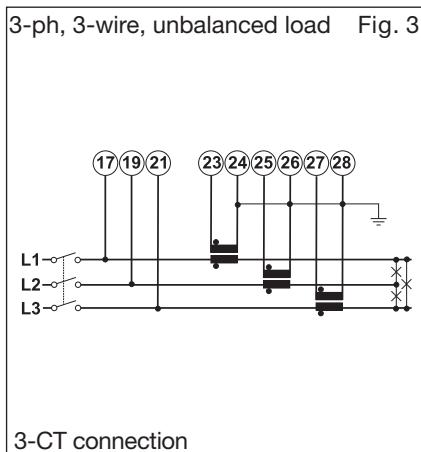

3-CT connection

3-ph, 4-wire, unbalanced load Fig. 2

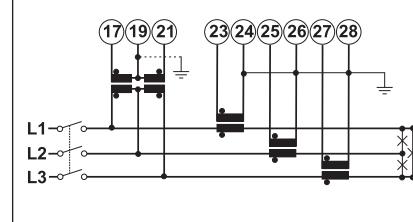

3-CT and 3-VT/PT connections

### System type selection: 3P.n

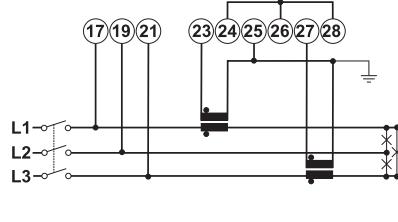

3-ph, 3-wire, unbalanced load Fig. 4

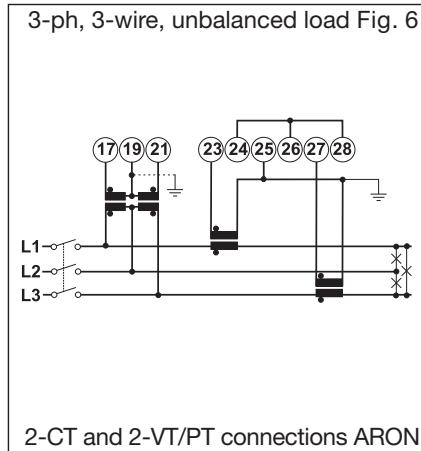

3-CT and 2-VT/PT connections

3-ph, 3-wire, unbalanced load Fig. 5

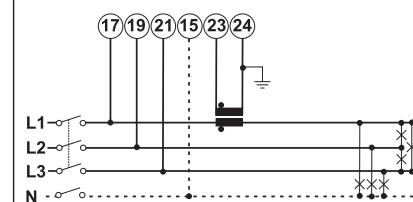

2-CT connections (ARON)

### System type selection: 3P.1

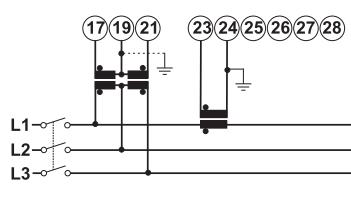

3-ph, 3-wire, balanced load Fig. 7

1-CT connection

NOTE: a 2-wire connection for voltage measurement is available across 15 and 17.

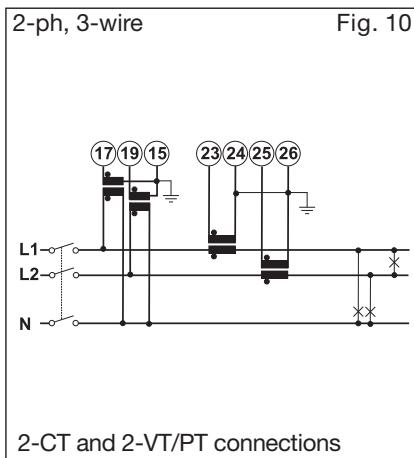

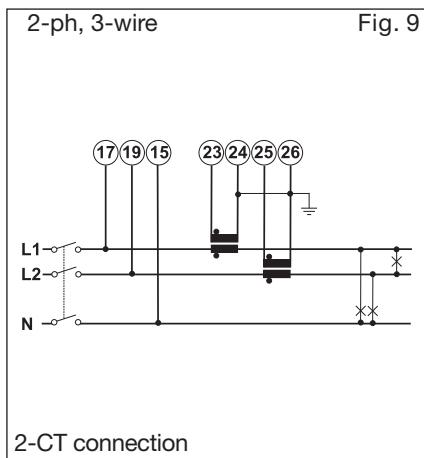

3-ph, 3-wire, balanced load Fig. 8

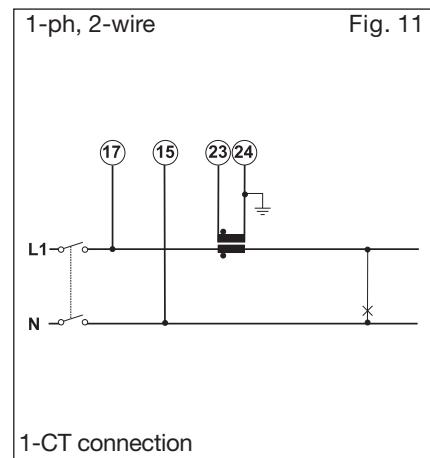

1-CT and 2-VT/PT connections

## Wiring diagrams

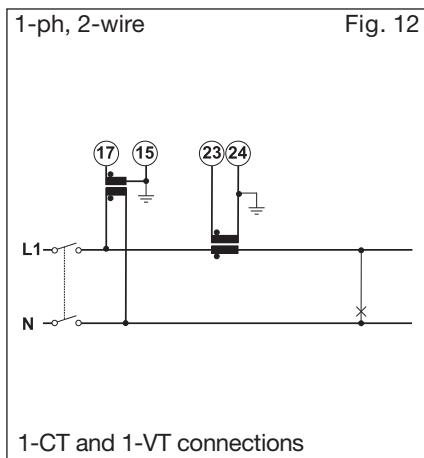

**System type selection: 2P**

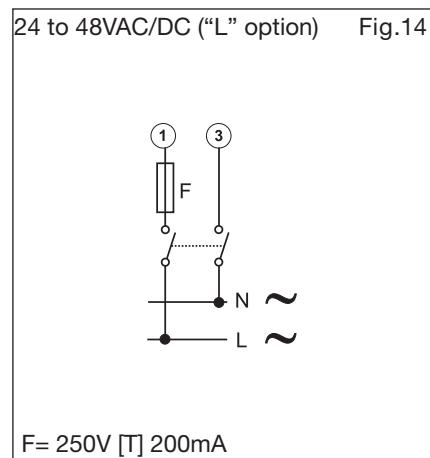

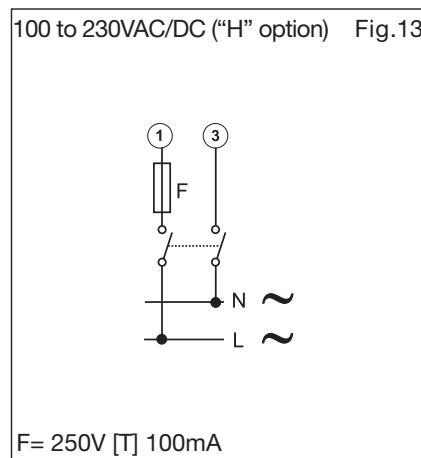

**System type selection: 1P**

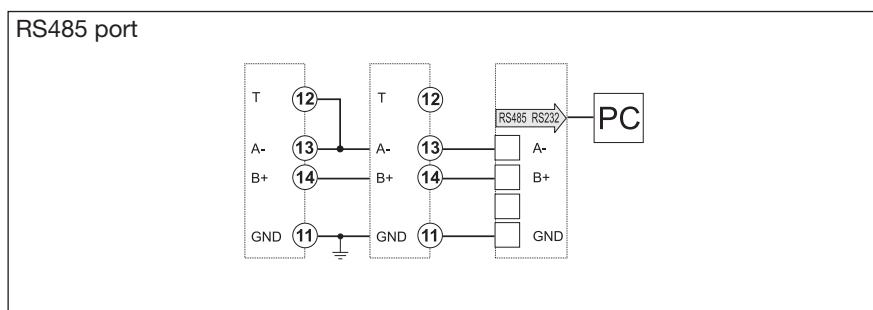

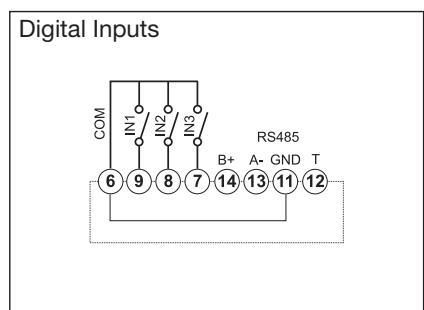

**System type selection: 1P**

**Auxiliary power supply wiring diagrams**

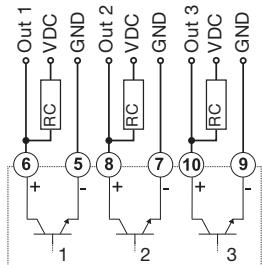

## Digital inputs and RS485 port wiring diagrams

RS485 NOTE: additional devices provided with RS485 are connected in parallel. The termination of the serial output is carried out only on the last instrument of the network, by means of a jumper between (A-) and (T).

## Open collector and relay outputs wiring diagrams

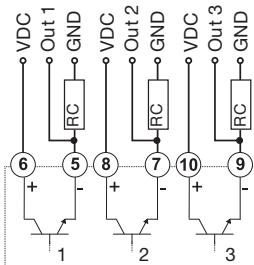

**Open Collector**

**GND reference**

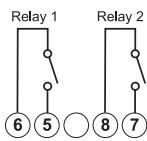

The load resistances (RC) must be designed so that the close contact current is lower than 100mA; the VDC voltage must be lower than or equal to 30VDC.

**Open Collector**

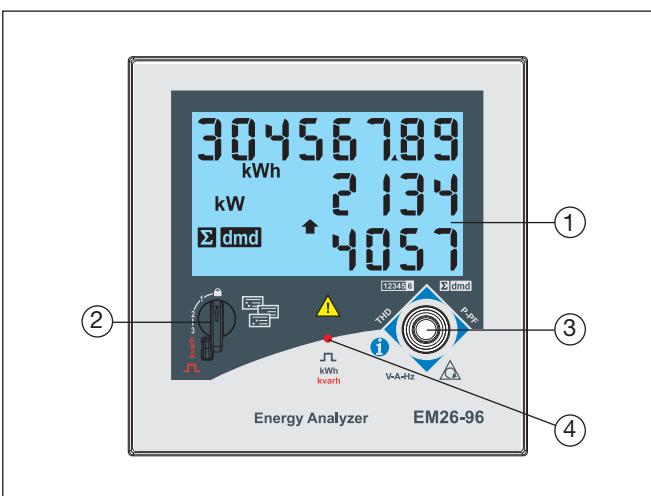

**VDC reference**

**Relay**

## Front panel description

### 1. Display

LCD-type with alphanumeric indications to:  
 - display configuration parameters;  
 - display all the measured variables.

### 2. Selector

To select the desired display pages and to lock the programming.

### 3. Joystick

To program the configuration parameters and scroll the variables on the display.

### 4. LED

Red LED blinking proportional to the energy being measured.

## Dimensions and Panel Cut-out
