

## Lightning Event Counter Type ECL-A-24

Lightning event counter is used for testing the lightning event in a certain area.

## Characteristics

| Type                      | ECL-A-24                                            |
|---------------------------|-----------------------------------------------------|
| Nominal Voltage           | 24VDC                                               |
| Counting Current          | ≥ 100A                                              |
| Display Model             | LED                                                 |
| LCD Indicator             | Lightning Event 0~99                                |
| Current Sample Mode       | Inductive Probe                                     |
| Battery                   | Battery 7.2V , Exchangeable,<br>service life> 1year |
| Operation temperature (℃) | -40~ + 80                                           |
| Mounting on               | 35 mm DIN rail                                      |
| Dimension                 | 2 modules, DIN 43880                                |
| Enclosure material        | Thermoplastic ; extinguishing degree<br>UL94 V-0    |
